Weekly Extra Credit Opportunity (Week 2)

1. I understand the main differences between comma-delimited and tab-delimited, but I am still unclear on what the effect of these differences are. Could you provide an example of the consequences/result of this difference and when it might apply?
2. What are the advantages or disadvantages between using `read.delim()` vs. `read_csv` and using `read.delim()` vs. `read_tsv` in reading in files? Also, what is the difference in the `read.delim()` and `read.delim2()` functions?
